Affinity Brandcenter

Yomyer S.L. · 2017

Affinity Petcare had a Brandcenter project for downloading brand graphic resources, built in Symfony 2 and too limited for the changes they needed, so we proposed rebuilding it from scratch.

All the backend was built in Drupal 8, taking advantage of its CMS capabilities and its Symfony logic, while the frontend was laid out with Bootstrap 3.

We created a downloads area with all the information for...

AWS

Affinity: True Instinct

Yomyer S.L. · 2017

After building the Affinity Brandcenter project for its main brands, the client wanted a unique layout for a new brand that, at that time and by client request, could not be associated with the Affinity brand.

We took the existing project, adapted it into a multisite with its own theme and removed every Affinity brand reference, both at code and SEO level.

AWS

Drupal: Statistics module

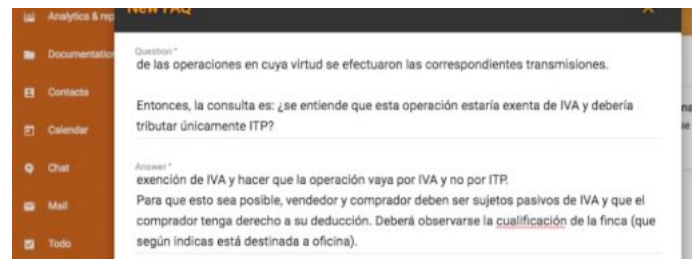

Yomyer S.L. · 2017

Affinity, the client for whom we had built several Drupal projects, asked us for a custom statistics module that could record the metrics they needed to monitor, both for applications and for their servers and third-party services. We decided to create a service that received calls from different websites and servers, creating statistics in an administration panel and through PDF reports.

ABAC: Accounting

Bonobo Community · 2014

Argos, an accounting company, was creating a program to manage its clients' accounting in Symfony and wanted to build the accounting logic through MySQL procedures and triggers. The product owner was not a programmer, but had studied SQL and wanted to be able to modify the logic if needed once the project was finished.

For me it was a challenge, because although I had solid MySQL experience, I had never worked at that level before...

MYSQL / MARIA...

Whimed

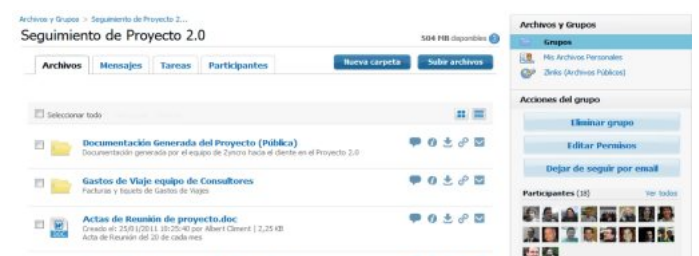

Bonobo Community · 2014

The client wanted to create a referral website and needed a developer to build it and synchronize it with a large CouchDB database through ElasticSearch. The website was developed in Zend Framework 2 and the frontend with Bootstrap. There was also important work creating scripts that imported data from external APIs, scraping and adapting images and handling other product retrieval tasks.

Hospital Gregorio Marañon: AASER

Pezred · 2010

I was asked to develop a small application for Hospital Gregorio Marañon in Madrid, to manage patient data for a clinical trial.

I built the project in PHP 5, creating a rudimentary framework that made it easy to create form-based applications.

PHP

MYSQL / MARIA...

Spanish Presidency: 2010 program

Pezred · 2010

We were commissioned to create an interactive CD to present the 2010 program for the Spanish Presidency of the EU. The application was built with Flash and Adobe AIR, and displayed several informational screens in a Windows window.

Acabados Polimet

Pezred · 2010

The paving and finishes company Polimet wanted to modernize its static corporate website and asked us to design a new site with social network integrations, which were becoming very popular at that time.

We built the website in Drupal 6, with a design based on the old website but modernized and connected to Facebook and Flickr, where the company wanted to share its completed work as a catalog.

PHP

DRUPAL

Sanfiz Real Estate

Pezred · 2010

I was assigned the maintenance of this PHP website for a real estate agency, which displayed some flats for rent and sale.
